

Hydraulic Technician – Aircraft Component MRO

We are seeking an experienced Hydraulic Technician to join our FAA-certified MRO facility specializing in the overhaul, repair, and testing of aircraft component parts. The ideal candidate has strong hands-on technical ability, attention to detail, and a commitment to safety and quality.

Responsibilities:

- Perform teardown, inspection, repair, and overhaul of aircraft hydraulic components (actuators, pumps, valves, servo controls, accumulators, etc.)
- Interpret CMMs, service bulletins, engineering drawings, and OEM technical data
- Conduct functional and pressure testing using hydraulic test stands
- Document all work in accordance with FAA, EASA, and company quality procedures
- Troubleshoot failures, identify root causes, and recommend corrective actions
- Maintain a clean, organized, and safety-compliant work environment

Requirements:

- 2+ years of experience in aircraft hydraulic component repair (MRO environment preferred)
- Ability to read and interpret CMMs and technical manuals
- Familiarity with hydraulic test equipment and precision measuring tools
- Strong mechanical aptitude and problem-solving skills
- Must be eligible to work in the U.S.

Preferred:

- Experience with Boeing, Airbus, Embraer, or regional aircraft components
- Prior experience in an FAA Part 145 repair station
- Knowledge of hydraulic theory, contamination control, and precision fitting

Benefits:

Competitive pay, growth opportunities, stable full-time schedule, and a strong team-oriented environment.

Work Location: Lubbock, In-person
